

Energy Connect Grid Connect Solar Installations

Energy Connect offer solar installations ranging from single 100w panels to large scale arrays of up to 20KW in overall capacity, however our best selling packages are our grid connected roof mounted 1KW to 4KW arrays.

These packages cover the design, supply, installation, electrical connection and testing of the solution.

Typically a 'Grid Connect' package will include:

- The relevant amount of 'BP Solar' branded panels
- The roof mount and all related fixings
- An AC Inverter and all necessary cabling to allow the power generated to be used by your household electrics or exported to the grid.
- All relevant electrical safety equipment (Isolators) and 17th Edition warning stickers
- Installation by MCS Approved Installers and NAPIT Registered Electrician to ensure eligibility for the governments Feed-In-Tariff. Please call for further information on this excellent generation rate available from 1st April 2010.
- Full documentation for the solution and on-site training on basic operation.
